**NORWEGIAN CRAFTSMANSHIP
SINCE 1949**

ORKEL – INNOVATIVE SOLUTIONS YOU CAN TRUST

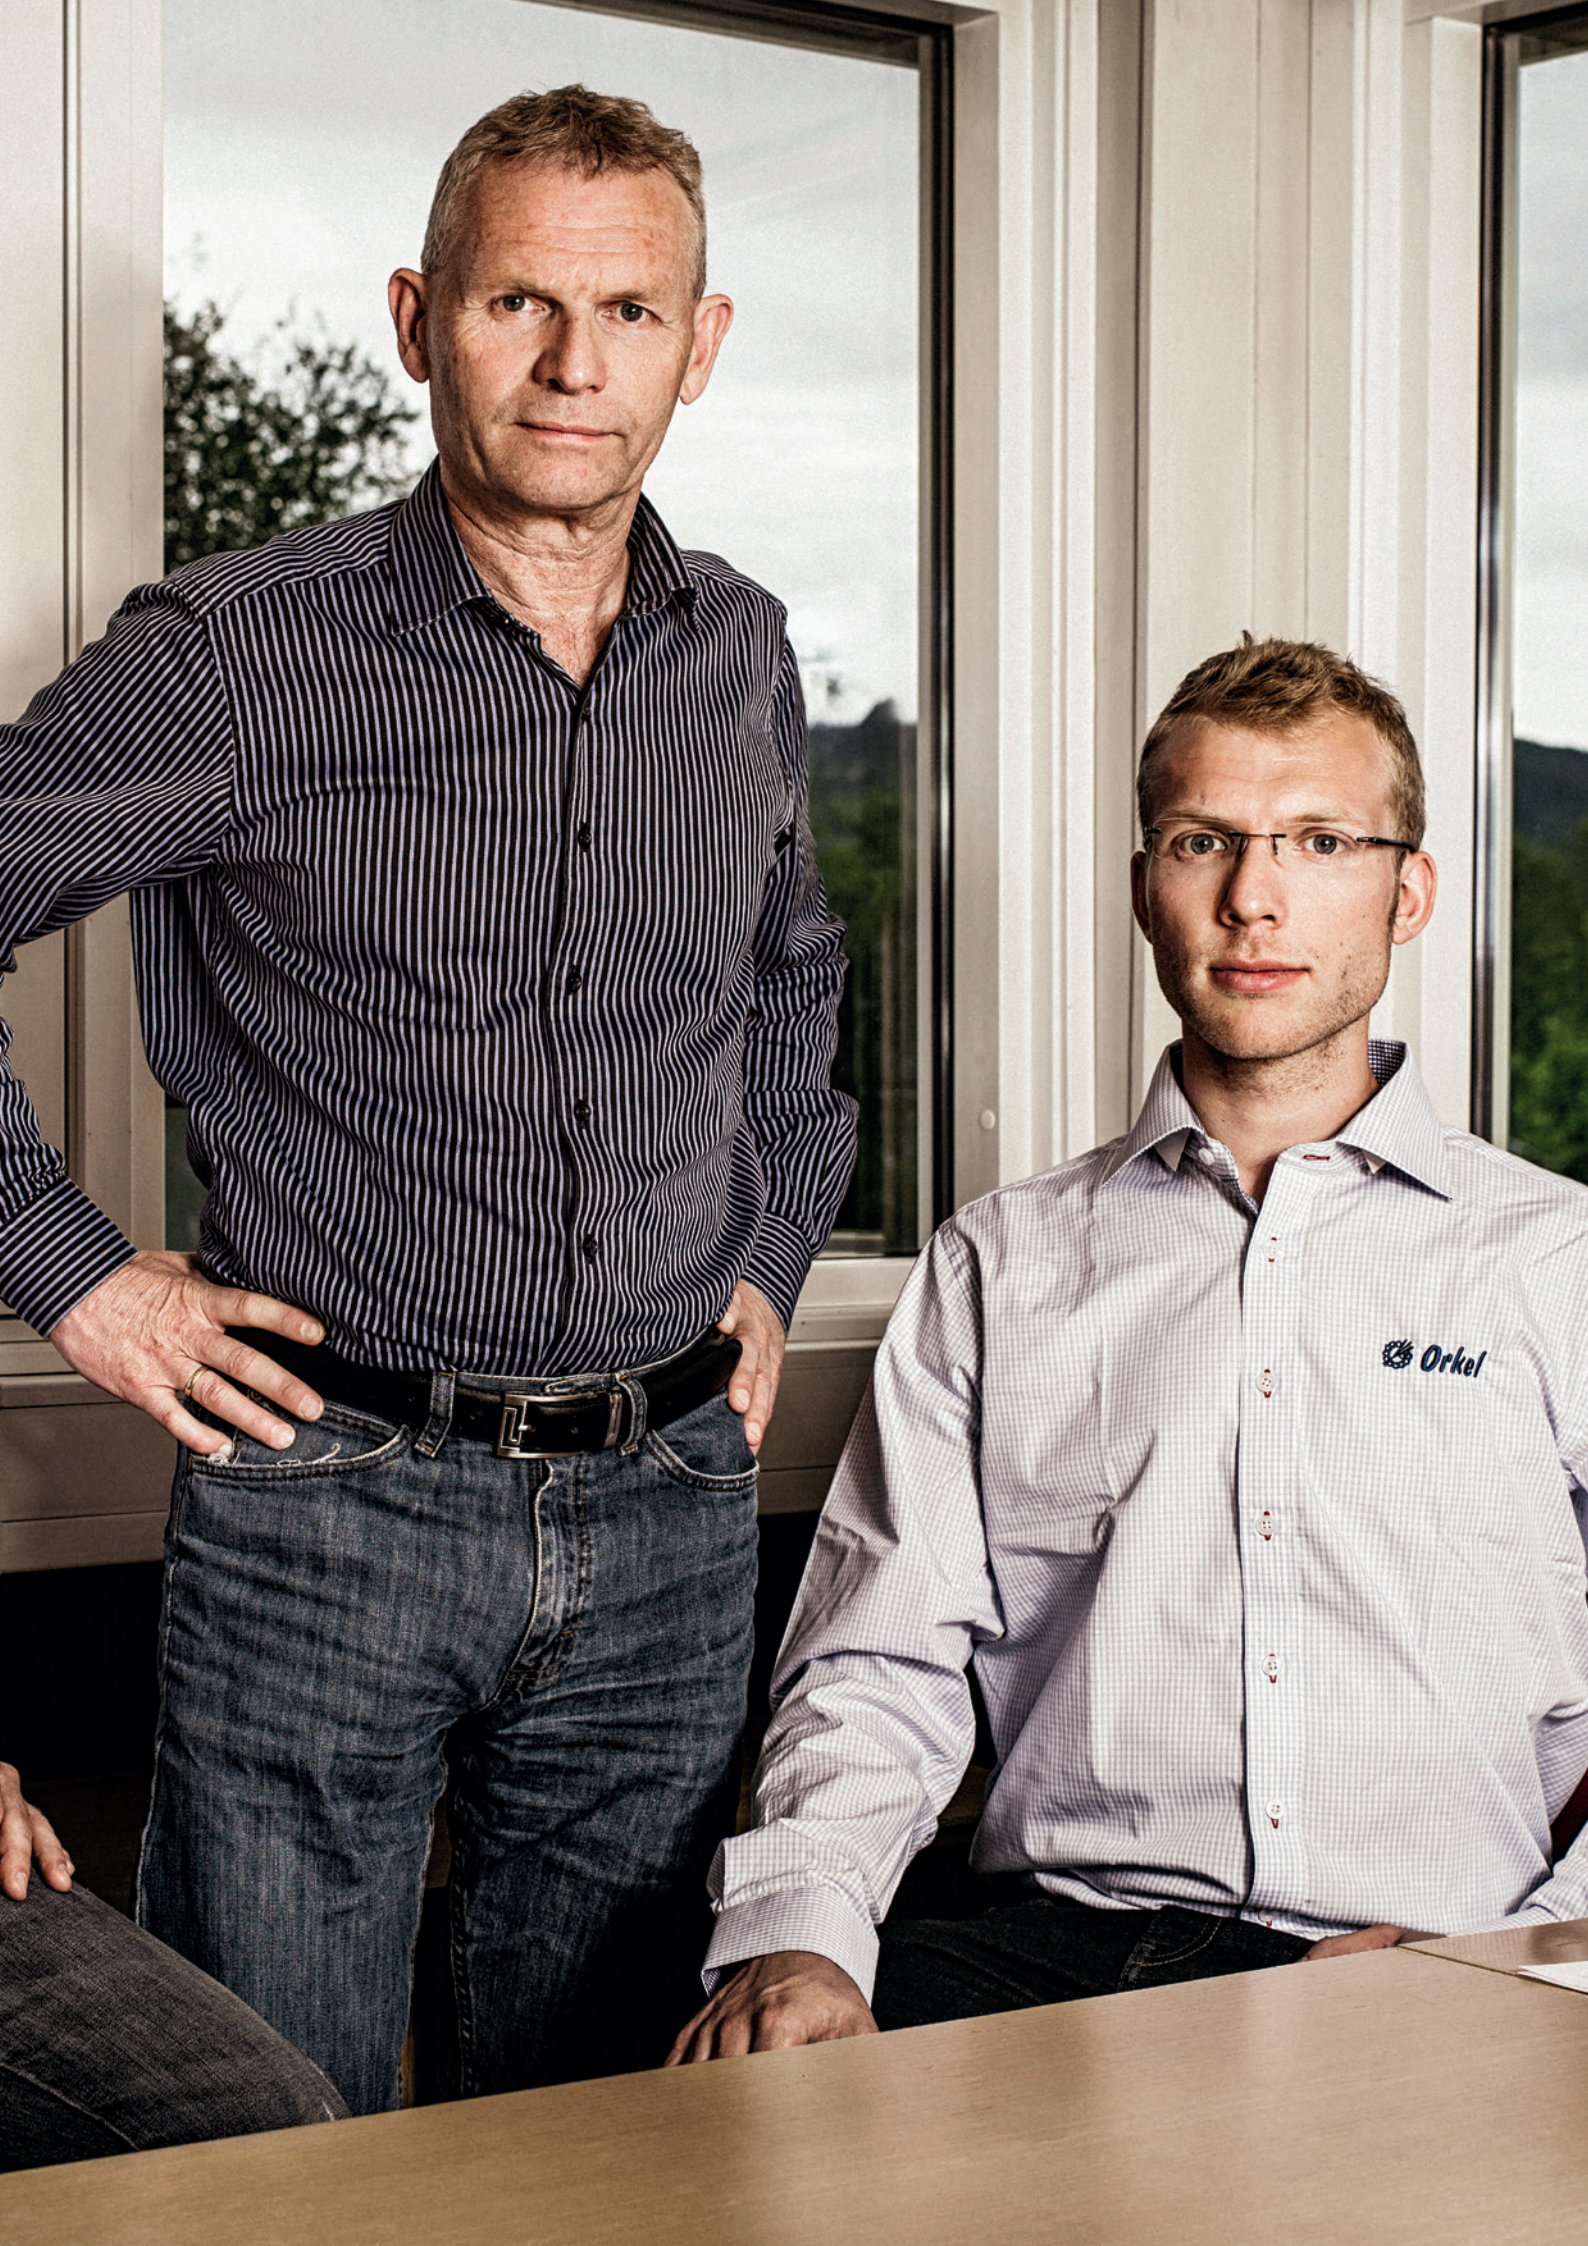

With a long and strong history, Orkel is a well-known manufacturer of high end machinery for use in the agricultural, waste and industrial segments. The family owned company has been built up from a local manufacturer of bikes and carts to being a leading global player in the compactor market.

Focus on quality and innovation are two of the main factors that have led Orkel to where the company is today: our products are sold to more than 50 countries, and are attracting interest from global firms looking for solutions related to compaction.

Quality products start with qualified employees
In Orkel we strongly believe that quality products stem from qualified employees throughout all parts of the process – from innovation to finished product, and all the way to aftersales. To attract qualified people, and keep them, we find that making sure Orkel is considered a great place to work is a key factor. Having employees with more than 40 years of experience working for us, we believe we are doing something right in that aspect.

Creating an attractive workplace also sparks creativity. Closeness between departments and open doors to the management group makes it easy to share ideas, brainstorm and solve challenges. It is much thank to our enthusiastic employees, past and present, that Orkel is where we are today.

 Orkel

MARKET ORIENTED PRODUCTION

We take pride in knowing our customers and their needs. It makes us able to develop efficient products and profitable solutions for our customers. To understand what really matters in real life has always been one of Orkels stronger skills, and a part of the foundation for success.

A unique close contact with the people who use our machines gives us highly relevant insight into its everyday usage. The in-house engineering team

collaborates closely with both our sales and production department. The result is effective and valued innovation.

INNOVATIVE AND SOLUTION ORIENTED

Since really catching the world's attention in 1986 with the open top baler, Orkel has truly been an innovative player internationally. Several patented and award winning solutions, such as the technology to compact fine structured materials, are the results of continuous focus on efficiency and problem solving products.

By being leading in the development of new products that enable our customers to meet the challenges of

the future, we also attract interest from large firms worldwide within agriculture and waste industries.

FROM NEIGHBORHOOD BIKE REPAIRS TO GLOBAL BRAND

Orkel was founded in 1949 by Johan Gjønnes, who was going to repair bikes and toys for neighbors. From repairing, he moved on to designing and producing at first toys, bikes and carts, and then bigger agricultural machines.

The first tricycles and toys are reminders of how humbly it all started. Today, second and third generation from the Gjønnes family are part of the management of Orkel.

Several of Orkel's first employees had background or high knowledge of farm work, and helped develop and

produce efficient, durable machines – quickly giving Orkel's products a reputation of solid craftsmanship and clever solutions. We strive to uphold this reputation even today, and to continue to lead the development of being a safe, stable place to work.

THE WAY FORWARD

The strong position Orkel has achieved in Norway and internationally as an innovative and reliable brand, is one we intend to uphold and strengthen even further. Our innovative solutions and cutting edge technology has made Orkel a leading player in the high end compactor market.

By continuously looking into new areas for usage, we continue to invent and develop the compaction technology. Examples of areas where our technology can be used are:

- Agriculture
- Waste
- Industrial segments

We collaborate with Norway's best scientific and research environments and universities – as for example Norwegian University of Science and Technology, SINTEF and The Research Council of Norway – on innovation of processes and products. New areas for use also means new potential markets, and we aim to be dominant within our segments, in both existing and new markets.

DISTRIBUTION AND SALES

Orkel products are sold to over 50 countries worldwide, from Chile and Australia in south to Japan in east and Iceland in north. You can find contact information for the sales channel closest to you on our webpages www.orkel.com.

The focus on customer dialogue and satisfaction has led to development of the Norwegian sales and service company. This wide network means that an Orkel engineer can assist you upon short notice if needed – either from a location in your area, or from the production facilities in Norway.

Production facilities

Both the headquarter and production facilities are located in Fannrem, some 40 km south of Trondheim in central Norway. In our large production hall we assemble our compactors, round balers and tractor trailers. The production lines are efficient, with clear structure and high regards of safety. It is not only in our development we are innovative and forward looking – the facilities are highly modern, and we take use of new technology that improves safety, quality and efficiency in production.

OUR PRODUCTS

Internationally, it is first and foremost the compactors and round balers Orkel is well known for. The high quality, advanced machinery are sold to over 50 countries, for use in both agricultural, waste and industrial segments. On our web pages you can find more detailed information and download brochures.

Industrial compactors

Hi-X: this exceptional compactor can bale a wide variety of bulk or chopped material. Ideal for fine materials as for example RDF, bin waste and saw dust, but the areas of use are still expanding. It can be highly customized to meet specific needs.

Agricultural compactors

Dens-X: the new generation compactors with our patented innovative feed hopper. Can bale numerous different materials, like forage maize, grasses and crimped grain and manure with patented solutions.

MP/MC: these mobile units are well-known as long running, solid compactors, for a variety of materials.

Tractor trailers

Orkel is the biggest manufacturer of tractor trailers in Norway. The trailers are manufactured and supplied for both contracting, farming and industry, in a full range of loading capabilities from 3-13 tons.
